

Idaho Hatchery Trout Rated Equal To Wild Fish In All Ways

Jim Howard Spray of the Falls

Charlie Bill, Idaho Falls High School basketball coach the past three seasons, has resigned a similar job at Aberdeen High School in Washington State after appointment earlier this spring.

Superintendent Murray Taylor said the school would start taking applications again; consequently, Charlie is presently without a job, however, has other irons in the fire.

He resigned the job reportedly for personal reasons, but in fact didn't like the setup at Aberdeen after visiting there earlier this month.

Apparently the parts of the job, which attracted Bill in the first place, that caused him not to go to Aberdeen.

He was told there would be no interference from the junior college there and secondly a new gymnasium was in the process of being built. During his visit Charlie found the gym wasn't even on paper for certain as yet and would unlikely be built for the coming season, at least.

The gymnasium they do have, which has seating in the ends only and concrete walls adjacent to the end of the bleachers, is dominated by the college. The high school bleachers and seating is limited to 145 hour practice sessions before the college moves in leaving the varsity to practice with the junior varsity.

The University of Idaho seems energetic about forming a new basketball conference, but has said very little about any football associations.

Skip Stahley, head grid coach and athletic director, appears to have found a new recruiting area, speaking of the State of Idaho, and figures a brighter future ahead for the Vandals.

Again this fall, the Vandals will face the traditionally tough grid state including Oregon, Washington State, Army, Oregon State, Utah State, Arizona, Montana, University of Pacific, and San Jose. In 1961 the state is virtually the same with Utah replacing Army, Idaho State replacing University of Pacific, and Montana replacing Oregon.

With the program set for the next two seasons, Stahley is definitely content to see what his new crop of sophomores will do. At the same time, he will be looking for a few of them, especially from Idaho State, Montana State, Montana, and Utah State that have been mentioned as possible schools for forming a grid conference to include all sports.

At the conclusion of the annual Varsity-Alumni game this spring, Stahley was high on his freshmen, but said it would be hard to judge them as sophomores this fall. The rookies made all of the outstanding plays in the win over the alumni and strangely enough all were Idaho products.

Wade Thomas, a halfback from Caldwell, led in rushing yards to score the first touchdown. Jerry Proctor, an end from Twin Falls, grabbed the only interception of

Production Costs Down For Faster Growing Species

By Jim Hunsicker
Idaho Fish Game Department

More vigorous, faster growing fish are being produced for less money now than ever before in the 25 hatcheries of the Idaho Fish and Game Department. Here are the figures.

Food costs are down from 25 cents a pound in 1957 to 20 cents a pound last year.

Switch To Pellets

The reason is that a switch was made from slaughterhouse by-products to dry food pellets and the conversion rate is up from 1.5 to 2.0. That means that it takes less feed to produce a pound of trout than it does with the old-type fish foods.

The big changeover from the use of live, frozen fish, if vitamins and slaughterhouse offal, as food in the hatcheries was in 1957.

That year the department bought over 150 million pounds of frozen fish and only about one-half million pounds of meat and meat products.

By last year the total was reduced. Only about 24,000 pounds of slaughterhouse foods were used, while over 1,410,000 pounds of pellets were fed.

The decrease is that of production has gone up by 50 per cent while total food costs increased only 10 per cent.

Fish have so less dry diet. It contains fish meal, brewer's yeast, wheat middlings, nutritional meal, and vitamin and mineral supplements.

The result in many cases is fish that cannot be told from their "wild" brothers. What a true fish eat many catch-and-release anglers find is that the hatchery fish are just as good as the wild fish, yet all "domestic" fish develop these characteristics.

For example, some trout are used in small numbers from fishing clubs and are sold to anglers. These fish are not only as good as the wild fish, but they are also more plentiful.

Some hatcheries are now producing fish that are as good as the wild fish, but they are also more plentiful.

Revised Yellowstone Lake Boat Regulations Defined

(Special To The Post-Register)
SPECIAL PERMIT NATIONAL PARK, July 2. — The revised regulations prohibiting motorboats on Yellowstone Lake, as announced by the Acting Secretary of the Interior, Curtis, on June 2, are designed to make amenable to motor boats motor wilderness sections in the name of the Yellowstone Lake.

Curators of strict control are designed to eliminate motorboat fishing, violation of waterfowl nesting areas and reduce impairment of the atmosphere of wilderness areas by excessive noise and power craft.

A general permit is required on all boats operating on waters in the park open to boating.

Special Permit Required

A special permit is required for all motorboats operating on the "Fire Hole Zone" of Yellowstone Lake and any commercial operation on waters bordering the park. Various water-borne craft are prohibited from being placed or operated upon waters of the park, including:

1. All privately-owned boats more than 20 feet in length.

2. All boats of any type.

3. All watercraft propelled by airplane type launching equipment, waning lights for boat operation from sunset to sunrise.

Each boat must have an approved motor of any type.

Boats must have a current approval stamp and a current fire extinguisher.

Boats must have a ballast tank in addition to automatic ballast devices.

All boats under 16 feet in length must have one and one-half inch diameter life preservers and one life preserver for each occupant.

All boats less than 16 feet in length must have one and one-half inch diameter life preservers and one life preserver for each occupant.

Registration Required

Boats leaving for extended trips in the overnight operation should register both at departure and return at the nearest game station.

No fish, oil, coffee, or any other food, or other articles in any park waters by water-borne craft, and each boat shall have a registered permit and comply in facilities provided on the dock.

All water-borne craft are prohibited from Owyhee, Diamond, and Twin Lake, as well as Bosch Spring.

All park streams (as delineated and from lakes) are to be kept free from motorboats on Yellowstone Lake and the chains between Lewis Lake and Shoshone Lake, the latter being limited to registered permit craft.

The operation of machinery-propelled craft on any waters of Yellowstone Lake, specifically including the "Fire Hole Zone" and the Southeast Arm shall be confined to areas shown on the map.

Five miles per hour zone.

Operation of machinery-propelled craft on any waters of Yellowstone Lake, specifically including the "Fire Hole Zone" and the Southeast Arm shall be confined to areas shown on the map.

Five miles per hour zone.

Have the last slip, and make the pitcher, first or third baseman nobody plays anymore except if you haven't, you've at least played better than the last, says the handle of maybe an "R" in the name of the pitcher, before hitting.

All this attempt to get traction on the bat handle is now set to be eliminated by a recent invention which has been lying around a hundred years, too close for anyone to see. It's simply the adaptation of the wood cleat, which is a little stick, onto bat handles. And I suppose, the guy who "discovered" it has been granted a United States patent on it. . . . I can't say I'm not a little bit of a pitcher. The word "cleat" means the bar "stick" to the heavy mallet, like a (Clemens' handle) hung onto a cleaved grip.

So next time anyone wants you to sign a petition demanding all bats to be made because they are "bang," think of Alan Sheppard's right. Or the ball hit you didn't bean someone with it as well as the banging present.

You'll be surprised at the number of ways in which the development of firearms has had an application in business industry.

For instance, take the recent flight into space. No average farmer has any notion of the intricate mechanical and electrical devices necessary to the making of the rocket which sent Alan Shepard into space. The average guy, though, does know that such a vehicle is in principle, or stages. One throws up a wavy, then separates from the remainder, and a second stage carries on . . . eventually leaving only the capsule.

To eject one stage of such a rocket from the rest requires, as above, considerable force. Now here you fit it with the stages we're talking about. The "blast" however, is nothing more than the air you push with nail and cutnigger, aim at the jet and go "bang!" The nail goes right down and into the cap.

Perhaps the most recent and successful application of firearms to industry is based on something you've heard about gun sticks. Everybody here, at a job, you want to play, said, "handy" literally means "handy" in a way that you can't get it out of your slowly rills and either scattered the sticks from his truck, or made every other player look for his life.

On have you ever watched big game players ever waving a

New York Mets Ink 7 Players

NEW YORK — The New York Mets Thursday announced the signing of seven college and high school baseball players in addition to Hank McCoy, 30-year-old catcher from Vallejo, Calif.

The Mets said McCoy got a three-year contract worth more than \$200,000.

Three of the other seven players were members of the Oregon State team. They are outfielders Olin Koss and Gary Baker and pitcher Len Cline. The Mets also signed second baseman Don Matthews of the University of Idaho and catcher Lenora, a South Orange, N. J., pitcher.
